

Power Pack On-Off, Operation and Part list

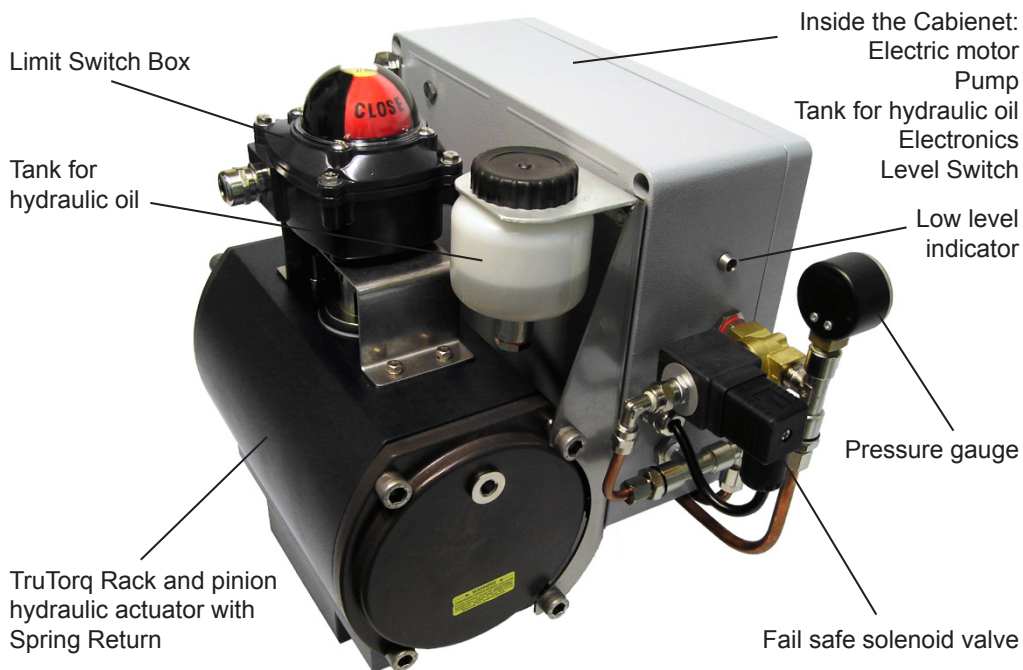

Electric-hydraulic actuator with Spring Return (SR), On-Off

Function

The unit operates with a rebuilt Spring Return (SR) pneumatic actuator, working with hydraulic oil (instead of air supply) in a closed system.

The basic scope of supply includes a cabinet with a hydraulic pump, solenoid valve and Limit switch to shut down the pump when the valve reach opened (or closed) position.

By loss of power the, the valve will automatically go to fail-safe position by means of the spring force in the actuator.

- **Actuators: TruTorq C- or E-Type, size 12 - 55.**
- **Many different options and several different voltages, see datasheet.**
